If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Mark Farley on 2/03/2011.

Please cancel claims 45-49 without prejudice or disclaimer of rights.

Please amend claims 1 and 18 to read as follows:

1. A process for extract purification of sugar beet raw juice, comprising:
 - a) preliming sugar beet raw juice by adding milk of lime thereto until a concentration of about 0.1 to 0.3 g of CaO/100 ml of raw juice has been attained for at least one of precipitation and coagulation of non-sucrose substances in the form of a coagulate,
 - b) adding at least one copolymer of acrylamide and sodium acrylate having a molar mass of about 5 million to about 22 million as a polyanionic flocculant up to flocculation assistant in a concentration of 1 to 8 ppm, to the prelimed juice,
 - c) removing coagulate from the preliming juice using at least one first removal apparatus to obtain a clear preliming juice,

Art Unit: 1789

d) main liming the preliming juice obtained after removal of the coagulate by adding milk of lime until a concentration of about 0.6 g of CaO/100 ml in the clear preliming juice has been attained, and

e) performing a first carbonatation by introducing carbon dioxide into the main liming juice followed by an optional subsequent performance of a second carbonatation.

18. A process for reducing lime consumption in extract purification of sugar beet raw juice, comprising:

a) preliming sugar beet raw juice by adding milk of lime thereto up to about 0.1 to 0.3 g of CaO/100 ml of raw juice for precipitation or coagulation of non-sucrose substances in the form of a coagulate,

b) adding at least one copolymer of acrylamide and sodium acrylate having a molar mass of about 5 million to about 22 million as a polyanionic flocculant up to a concentration of 1 to 8 ppm, to the prelimed juice,

c) removing the coagulate from the preliming juice using at least one first removal apparatus to obtain a clear preliming juice,

d) main liming preliming juice obtained after removal of the coagulate by adding milk of lime up to about 0.6 g of CaO/100 ml to the clear preliming juice, and

e) performing a first carbonatation by introducing carbon dioxide into the main liming juice and subsequently performing a second carbonatation without intermediate postliming.

The following is an examiner's statement of reasons for allowance:

The prior art fails to anticipate or teach a process for extract purification of sugar beet raw juice, comprising each and every step in the specific order as listed in claims 1, 18, and 27.

Although the prior art provides for applicant's steps, individually, there is no teaching or reason for obviousness for one of skill to add the claimed copolymer to the prelimed juice to accomplish the order of the process as claimed. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure, includes:

Toth of **US 4,795,494**; Coville of **US 5,891,254**; and Rorabaugh of **Beet Juice Defication; Industrial & Engineering Chemistry, Vol. 43, No. 3; March 1951**.

Unexpected results of the claimed process are: 1) that the removal of the non-sucrose substances which have precipitated out and flocculated out in the preliming stage forms a new product in sugar production, which features a high content of phosphate and which can therefore be used especially as an animal feed constituent; and 2) the quality of the carbolime obtained in the pressing-out of the carbonated juice concentrate after the liming step also improves, especially with regard to its use as a fertilizer, in that it features a considerably reduced content of phosphate, which solves the problem that exist with the over fertilization of farm land with phosphate.

Art Unit: 1789

It is further noted that one of skill in the art would not consider steps of "liming" and "preliming" to be the coextensive because one in the art at the time of the invention would expect each step to comprise specifically distinct pH ranges.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
